

4 Channel USB-Sensor-Interface SI-USB3 with Configuration- and Evaluation Software

Performance Features

- Competitive 'plug & measure' concept
- Fast measurement of up to 5000 meas./s per measuring channel
- Input ranges for mV/V, V and mA
- Input ranges for linear potentiometer, temperature probe
- PT100 and quadrature encoder
- Input ranges combinable with one another
- Digitally switchable analogue input filter
- Full synchronicity of all measuring channels
- Adjustment and control signal activation via software
- Free LabVIEW- and DLL-driver

Description

The sensor interface SI-USB3 is connected between sensor and PC. In this way, analog sensor signals will be digitized with up to 16 bit resolution.

By the measuring rate of 5000 measurements/s per measuring channel, high-dynamic measurements can be achieved. The measured values are transferred to a PC via the USB interface and visualized by means of software. If a control signal is integrated in the sensor, an automatic adjustment can be carried out and checked at any time (measuring chain monitoring).

Following sensor output signals can be digitally converted and conveniently displayed and evaluated via the free evaluation software:

| | |
|-----------------------------------|--|
| .../DMS (Strain gauges) | Input range ± 3 mV/V (Excitation $4V \leq 20$ mA) |
| .../U5/U10 | Input range $\pm 5V/\pm 10V$ (Sensor supply $12V \leq 80$ mA) |
| .../I0/I4/I10/I12 | Input range 0/4 ... 20 mA (Sensor supply $12V \leq 80$ mA) |
| .../LP (Linear potentiometer) | Input range 0 ... 5V (Sensor supply $4V \leq 20$ mA) |
| .../PT100 (Temperature probes) | Input range -200 ... 860 °C (Sensor supply $4V \leq 20$ mA) |

Application

- Mobile test measurements by laptop
- Experimental setups in test laboratories
- Measuring and control devices
- Diagnosis measurements in chemical industries
- PC-based recordings of strain characteristics
- In biotechnology

.../TTL
(Quadrature encoder: For torque sensors with speed / angle measurement)

Input range 5V TTL
(Sensor supply $5V \leq 85$ mA)

Many standard sensors, such as force-, torque-, displacement- and pressure sensors, linear potentiometers, temperature probes PT100 etc., can be used with the SI-USB3. The sensor parameters can be stored in the SI-USB3. After a single parameterization, each sensor is automatically recognized by the software.

The voltage supply of the SI-USB3 is provided by an external mains adapter, or by a polarity-protected mains connector. The connected sensors are directly supplied with voltage through the measuring amplifier which eliminates the need for separate sensor supply voltage. The low-pass filter second order allows filtration of unwanted frequencies. Here you can distinguish between four cutoff frequencies.

The connection to LabVIEW or integration into own programs is possible with the freely available driver package.

³ Lorenz-Standard:

- Supply voltage 5V, calibration range ± 1 mV/V in 10 steps, calibration range ± 2 mV/V in 10 or 20 steps
- Language of the Certificate: German and English
- Calibration at DC: Normal K3608, if so display above Keithley 2000 or Lorenz VS2 (Lorenz amplifier with USB interface)
- Calibration at 225 Hz: Normal K3608, if so display above HBM MGCplus + ML38
- Calibration at 225 Hz: Normal BN100A, if so display above HBM DMP40

Configuration and Evaluation Software VS3

The configuration and evaluation software serves for easy evaluation and graphical visualisation of the evaluated data on a PC. The software allows direct read-in of measured data into a text file in CSV-format through the USB port of a PC. This enables further analyses with a commercially available spreadsheet program at any time.
